Discharging to:

**Irrigation Ditch** 

### THIS IS A DRAFT DOCUMENT

UPDES No: UT-0023001

#### I. Introduction

Wasteload analyses are performed to determine point source effluent limitations necessary to maintain designated beneficial uses by evaluating projected effects of discharge concentrations on in-stream water quality. The wasteload analysis also takes into account downstream designated uses [R317-2-8, UAC]. Projected concentrations are compared to numeric water quality standards to determine acceptability. The anti-degradation policy and procedures are also considered. The primary in-stream parameters of concern may include metals (as a function of hardness), total dissolved solids (TDS), total residual chlorine (TRC), un-ionized ammonia (as a function of pH and temperature, measured and evaluated interms of total ammonia), and dissolved oxygen.

Mathematical water quality modeling is employed to determine stream quality response to point source discharges. Models aid in the effort of anticipating stream quality at future effluent flows at critical environmental conditions (e.g., low stream flow, high temperature, high pH, etc).

The numeric criteria in this wasteload analysis may always be modified by narrative criteria and other conditions determined by staff of the Division of Water Quality.

### II. Receiving Water and Stream Classification

Irrigation Ditch:

2B, 3E, 4

Antidegradation Review:

Antidegratation Level II NOT Required

#### III. Numeric Stream Standards for Protection of Aquatic Wildlife

Total Ammonia (TNH3)

Varies as a function of Temperature and pH Rebound. See Water Quality Standards

Chronic Total Residual Chlorine (TRC)

0.011 mg/l (4 Day Average) 0.019 mg/l (1 Hour Average)

Chronic Dissolved Oxygen (DO)

5.00 mg/l (30 Day Average) N/A mg/l (7Day Average) 3.00 mg/l (1 Day Average

Maximum Total Dissolved Solids

1200.0 mg/l

There are additional standards that apply to this receiving water, but were not considered in this modeling/waste load allocation analysis.

#### VII. Mathematical Modeling of Stream Quality

Model configuration was accomplished utilizing standard modeling procedures. Data points were plotted and coefficients adjusted as required to match observed data as closely as possible.

The modeling approach used in this analysis included one or a combination of the following models.

- (1) The Utah River Model, Utah Division of Water Quality, 1992. Based upon STREAMDO IV (Region VIII) and Supplemental Ammonia Toxicity Models; EPA Region VIII, Sept. 1990 and QUAL2E (EPA, Athens, GA).
- (2) Utah Ammonia/Chlorine Model, Utah Division of Water Quality, 1992.
- (3) AMMTOX Model, University of Colorado, Center of Limnology, and EPA Region 8
- (4) Principles of Surface Water Quality Modeling and Control. Robert V. Thomann, et.al. Harper Collins Publisher, Inc. 1987, pp. 644.

Coefficients used in the model were based, in part, upon the following references:

(1) Rates, Constants, and Kinetics Formulations in Surface Water Quality Modeling. Environmental Research Laboratory, Office of Research and Development, U.S. Environmental Protection Agency, Athens Georgia. EPA/600/3-85/040 June 1985.

(2) Principles of Surface Water Quality Modeling and Control. Robert V. Thomann, et.al. Harper Collins Publisher, Inc. 1987, pp. 644.

#### VIII. Modeling Information

The required information for the model may include the following information for both the upstream conditions at low flow and the effluent conditions:

Flow, Q, (cfs or MGD)
Temperature, Deg. C.
pH
BOD5, mg/l
Metals, ug/l
Total NH3-N, mg/l
Total Dissolved Solids (TDS), mg/l
Toxic Organics of Concern, ug/l

#### **Other Conditions**

In addition to the upstream and effluent conditions, the models require a variety of physical and biological coefficients and other technical information. In the process of actually establishing the permit limits for an effluent, values are used based upon the available data, model calibration, literature values, site visits and best professional judgement.

#### **Model Inputs**

The following is upstream and discharge information that was utilized as inputs for the analysis. Dry washes are considered to have an upstream flow equal to the flow of the discharge.

## Current Upstream Information Stream

	Critical Low							
	Flow	Temp.	рН	T-NH3	BOD5	DO	TRC	TDS
	cfs	Deg. C		mg/l as N	mg/l	mg/l	mg/l	mg/l

All Seasons	0.0000	0.53*	1.06*	0.1*	0.053*	10.0	·	* 1/2 MDL

#### **Projected Discharge Information**

Season	Flow, MGD	Temp.	TDS mg/l	TDS tons/day
Summer	0.88000	NA	500.00	1.83443
Fall	0.88000	NA		
Winter	0.88000	NA		
Spring	0.88000	NA		

All model numerical inputs, intermediate calculations, outputs and graphs are available for discussion, inspection and copy at the Division of Water Quality.

#### IX. Effluent Limitations

Current State water quality standards are required to be met under a variety of conditions including in-stream flows targeted to the 7-day, 10-year low flow (R317-2-9).

Other conditions used in the modeling effort coincide with the environmental conditions expected at low stream flows.

#### Effluent Limitation for Flow based upon Water Quality Standards

In-stream criteria of downstream segments will be met with an effluent flow maximum value as follows:

Season		Daily Average	
Summer	0.880	MGD	1.361 cfs
Fall	0.880	MGD	1.361 cfs
Winter	0.880	MGD	1.361 cfs
Spring	0.880	MGD	1.361 cfs

#### Flow Requirement or Loading Requirement

The calculations in this wasteload analysis utilize the maximum effluent discharge flow of 0.88 MGD. If the discharger is allowed to have a flow greater than 0.88 MGD during 7Q10 conditions, and effluent limit concentrations as indicated, then water quality standards will be violated. In order to prevent this from occuring, the permit writers must include the discharge flow limititation as indicated above; or, include loading effluent limits in the permit.

#### Effluent Limitation for Whole Effluent Toxicity (WET) based upon WET Policy

Effluent Toxicity will not occur in downstream segements if the values below are met.

WET Requirements	LC50 >	EOP Effluent	[Acute]
	IC25 >	99.9% Effluent	[Chronic]

# Effluent Limitation for Biological Oxygen Demand (BOD) based upon Water Quality Standards or Regulations

In-stream criteria of downstream segments for Dissolved Oxygen will be met with an effluent BOD limitation as follows:

Season	Concentration	
Summer	25.0 mg/l as BOD5	183.4 lbs/day
Fall	25.0 mg/l as BOD5	183.4 lbs/day
Winter	25.0 mg/l as BOD5	183.4 lbs/day
Spring	25.0 mg/l as BOD5	183.4 lbs/day

## Effluent Limitation for Dissolved Oxygen (DO) based upon Water Quality Standards

In-stream criteria of downstream segments for Dissolved Oxygen will be met with an effluent D.O. limitation as follows:

Season	Concentration		
Summer	NA		
Fall	NA		
Winter	NA		
Spring	NA		

### Effluent Limitation for Total Ammonia based upon Water Quality Standards

In-stream criteria of downstream segments for Total Ammonia will be met with an effluent limitation (expressed as Total Ammonia as N) as follows:

Seas	on		
21	Concentra	ation	Load
Summer	4 Day Avg Chronic	NA mg/l as N	NA lbs/day
	1 Hour Avg Acute	NA mg/l as N	NA lbs/day
Fall	4 Day Avg Chronic	NA mg/l as N	NA lbs/day
	1 Hour Avg Acute	NA mg/l as N	NA lbs/day
Winter	4 Day Avg Chronic	NA mg/l as N	NA lbs/day
	1 Hour Avg Acute	NA mg/l as N	NA lbs/day
Spring	4 Day Avg Chronic	NA mg/l as N	NA lbs/day
-1 -3	1 Hour Avg Acute	NA mg/l as N	NA lbs/day

Acute limit calculated with an Acute Zone of Initial Dilution (ZID) to be equal to 100.%.

## Effluent Limitation for Total Residual Chlorine based upon Water Quality Standards

In-stream criteria of downstream segments for Total Residual Chlorine will be met with an effluent limitation as follows:

Seaso	on	Concentration	Load
Summer	4 Day Avg Chronic	NA mg/l	NA lbs/day
	1 Hour Avg Acute	NA mg/l	NA lbs/day
Fall	4 Day Avg Chronic	NA mg/l	NA lbs/day
	1 Hour Avg Acute	NA mg/l	NA lbs/day
Winter	4 Day Avg Chronic	NA mg/l	NA lbs/day
	1 Hour Avg Acute	NA mg/l	NA lbs/day
Spring	4 Day Avg Chronic	NA mg/l	NA lbs/day
. 0	1 Hour Avg Acute	NA mg/l	NA lbs/day

### Effluent Limitations for Total Dissolved Solids based upon Water Quality Standards

Seas	on	Concentra	ation	Load	Ŀ
Summer Fall Winter Spring	Maximum, Acute Maximum, Acute Maximum, Acute 4 Day Avg Chronic	1200.5 1200.5 1200.5 1200.5	mg/l mg/l mg/l mg/l	4.40 4.40 4.40 4.40	tons/day tons/day tons/day tons/day
Colorado S	alinity Forum Limits	Determine	d by Pe	rmitting Section	

## Effluent Limitations for Total Recoverable Metals based upon Water Quality Standards

In-stream criteria of downstream segments for Dissolved Metals will be met with an effluent limitation as follows (based upon a hardness of 273.02 mg/l):

		4 Day Aver	age	1 Hour A	Average	
	Concent	•	Load	Concentration		Load
Aluminum	N/A		N/A	750.5	ug/l	5.5 lbs/day
Arsenic	190.14	ug/l	0.9 lbs/day	` 340.2	ug/l	2.5 lbs/day
Cadmium	0.57	ug/i	0.0 lbs/day	5.9	ug/i	0.0 lbs/day

## Effluent Targets for Pollution Indicators Based upon Water Quality Standards

In-stream criteria of downstream segments for Pollution Indicators will be met with an effluent limit as follows:

	1 Hour Average		
	Concentration	Loading	
Gross Beta (pCi/l)	50.0 pCi/L		
BOD (mg/l)	5.0 mg/l	36.7 lbs/day	
Nitrates as N	4.0 mg/l	29.4 lbs/day	
Total Phosphorus as P	0.05 mg/l	0.4 lbs/day	
Total Suspended Solids	90.0 mg/l	660.4 lbs/day	

Note: Pollution indicator targets are for information purposes only.

# Effluent Limitations for Protection of Human Health [Toxics Rule] Based upon Water Quality Standards (Most stringent of 1C or 3A & 3B as appropriate.)

In-stream criteria of downstream segments for Protection of Human Health [Toxics] will be met with an effluent limit as follows:

	Maximum Cor	n Concentration

Lead	100.1		Acute Controls
Mercury	0.150		Acute Controls
Nickel	4603.4		Acute Controls
Selenium	50.0		Acute Controls
Silver	0.0	N/A	
Thallium	6.3		
Zinc	0.0		Acute Controls
Boron	750.55		

Other Effluent Limitations are based upon R317-1.

E. coli

126.0 organisms per 100 ml

#### X. Antidegradation Considerations

The Utah Antidegradation Policy allows for degradation of existing quality where it is determined that such lowering of water quality is necessary to accommodate important economic or social development in the area in which the waters are protected [R317-2-3]. It has been determined that certain chemical parameters introduced by this discharge will cause an increase of the concentration of said parameters in the receiving waters. Under no conditions will the increase in concentration be allowed to interfere with existing instream water uses.

The antidegradation rules and procedures allow for modification of effluent limits less than those based strictly upon mass balance equations utilizing 100% of the assimilative capacity of the receiving water. Additional factors include considerations for "Blue-ribbon" fisheries, special recreational areas, threatened and endangered species, and drinking water sources.

An Antidegradation Level I Review was conducted on this discharge and its effect on the receiving water. Based upon that review, it has been determined that an

#### **Antidegradation Level II Review is NOT Required**

#### XI. Colorado River Salinity Forum Considerations

Discharges in the Colorado River Basin are required to have their discharge at a TDS loading of less than 1.00 tons/day unless certain exemptions apply. Refer to the Forum's Guidelines for additional information allowing for an exceedence of this value.

#### XII. Summary Comments

The mathematical modeling and best professional judgement indicate that violations of receiving water beneficial uses with their associated water quality standards, including important downstream segments, will not occur for the evaluated parameters of concern as discussed above if the effluent limitations indicated above are met.

#### XIII. Notice of UPDES Requirement

This Addendum to the Statement of Basis does not authorize any entity or party to discharge to the waters of the State of Utah. That authority is granted through a UPDES permit issued by the Utah Division of Water Quality. The numbers presented here may be changed as a function of other factors. Dischargers are strongly urged to contact the Permits Section for further information. Permit writers may utilize other information to adjust these limits and/or to determine other limits based upon best available technology and other considerations provided that the values in this wasteload analysis [TMDL] are not compromised. See special provisions in Utah Water Quality Standards for adjustments in the Total Dissolved Solids values based upon background concentration.
